# 01. Sphere Overview

# Company Overview

SPHERE

A Global Supply Chain Management Company
That Designs and Manages Specialty Alloy Supply Chains

- Acts as an official supplier and strategic partner to **a leading US-based aerospace company**
- Provides premium alloys with high precision and reliability by connecting global partner networks with top-tier vendors across future industries
- Defines specifications from the R&D stage and supplies products through an approved global vendor network, while managing quality, delivery, and cost in an integrated manner

# Sphere’s Strategy & Core Competencies

- Sphere designs and implements supply structures that turn complex customer requirements into production, reality and delivery, while integrating and managing a global vendor network.

**Supply Solutions Optimized for Customer Requirements**

**Integrated Specialty Alloy Supply Chain Design & Management**

## Global Customers

Advanced specs · Demanding quality standards · Short lead time · Evolving technologies

## SPHERE

Spec analysis · Production allocation · Quality & Delivery management · Change management · Urgent demand response

## Mill Vendors

Flexibility & Responsiveness · Advanced processes · Managed capacity

### Proven Execution

Experience and accumulated data with complex customer requirements

**10-Year LTA**

With a leading US-based aerospace company

### Integrated SCM

End-to-end management across sourcing, processing, quality and delivery

**Short lead time**

Customer-specific supply chains for fast delivery response

### Flexible Scalability

Flexible response based on a Light-Asset model and global vendor network

**Global Network**

Specialized vendor network across North America, Europe and Asia

### Raw Material Access

Strategic access to critical raw material supply chains

**ENC 10%**

Strategic investment in a key nickel supply source

### Quality

Quality management structure aligned with aerospace requirements

**AS9120B**

International aerospace quality management certification

Commenced trial operations
at the Indonesian ENC refinery

**2026.03.**
Achieved Q1 2026 consolidated revenue of KRW 45.0B (+106.2% YoY)

**2026.02.**
Completed acquisition of a 10% stake in the Indonesian ENC refinery (USD 240M)

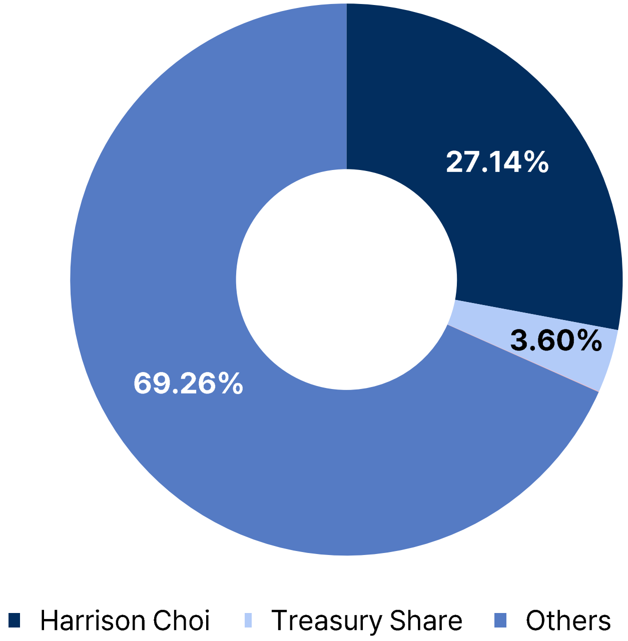
**2026.01.**
Raw material import & distribution
(Nickel, rare earths, etc.)

# Shareholders & Ownership Structure

## Sphere Shareholding Structure

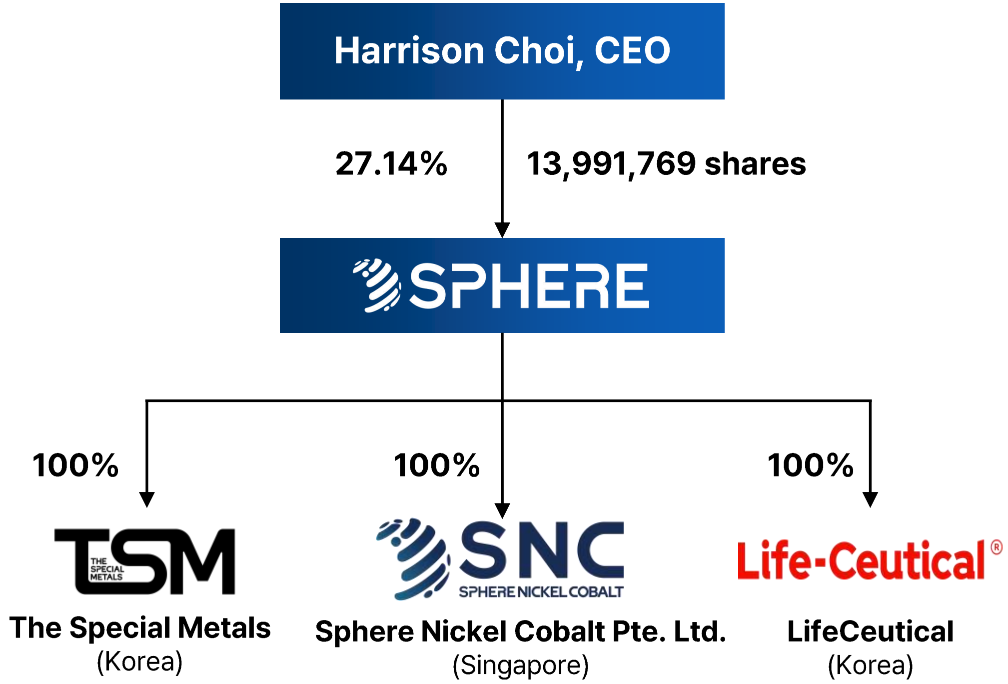
As of June 30, 2026

**Total Shares Outstanding:**
**51,551,362 shares**



## Sphere Ownership Structure

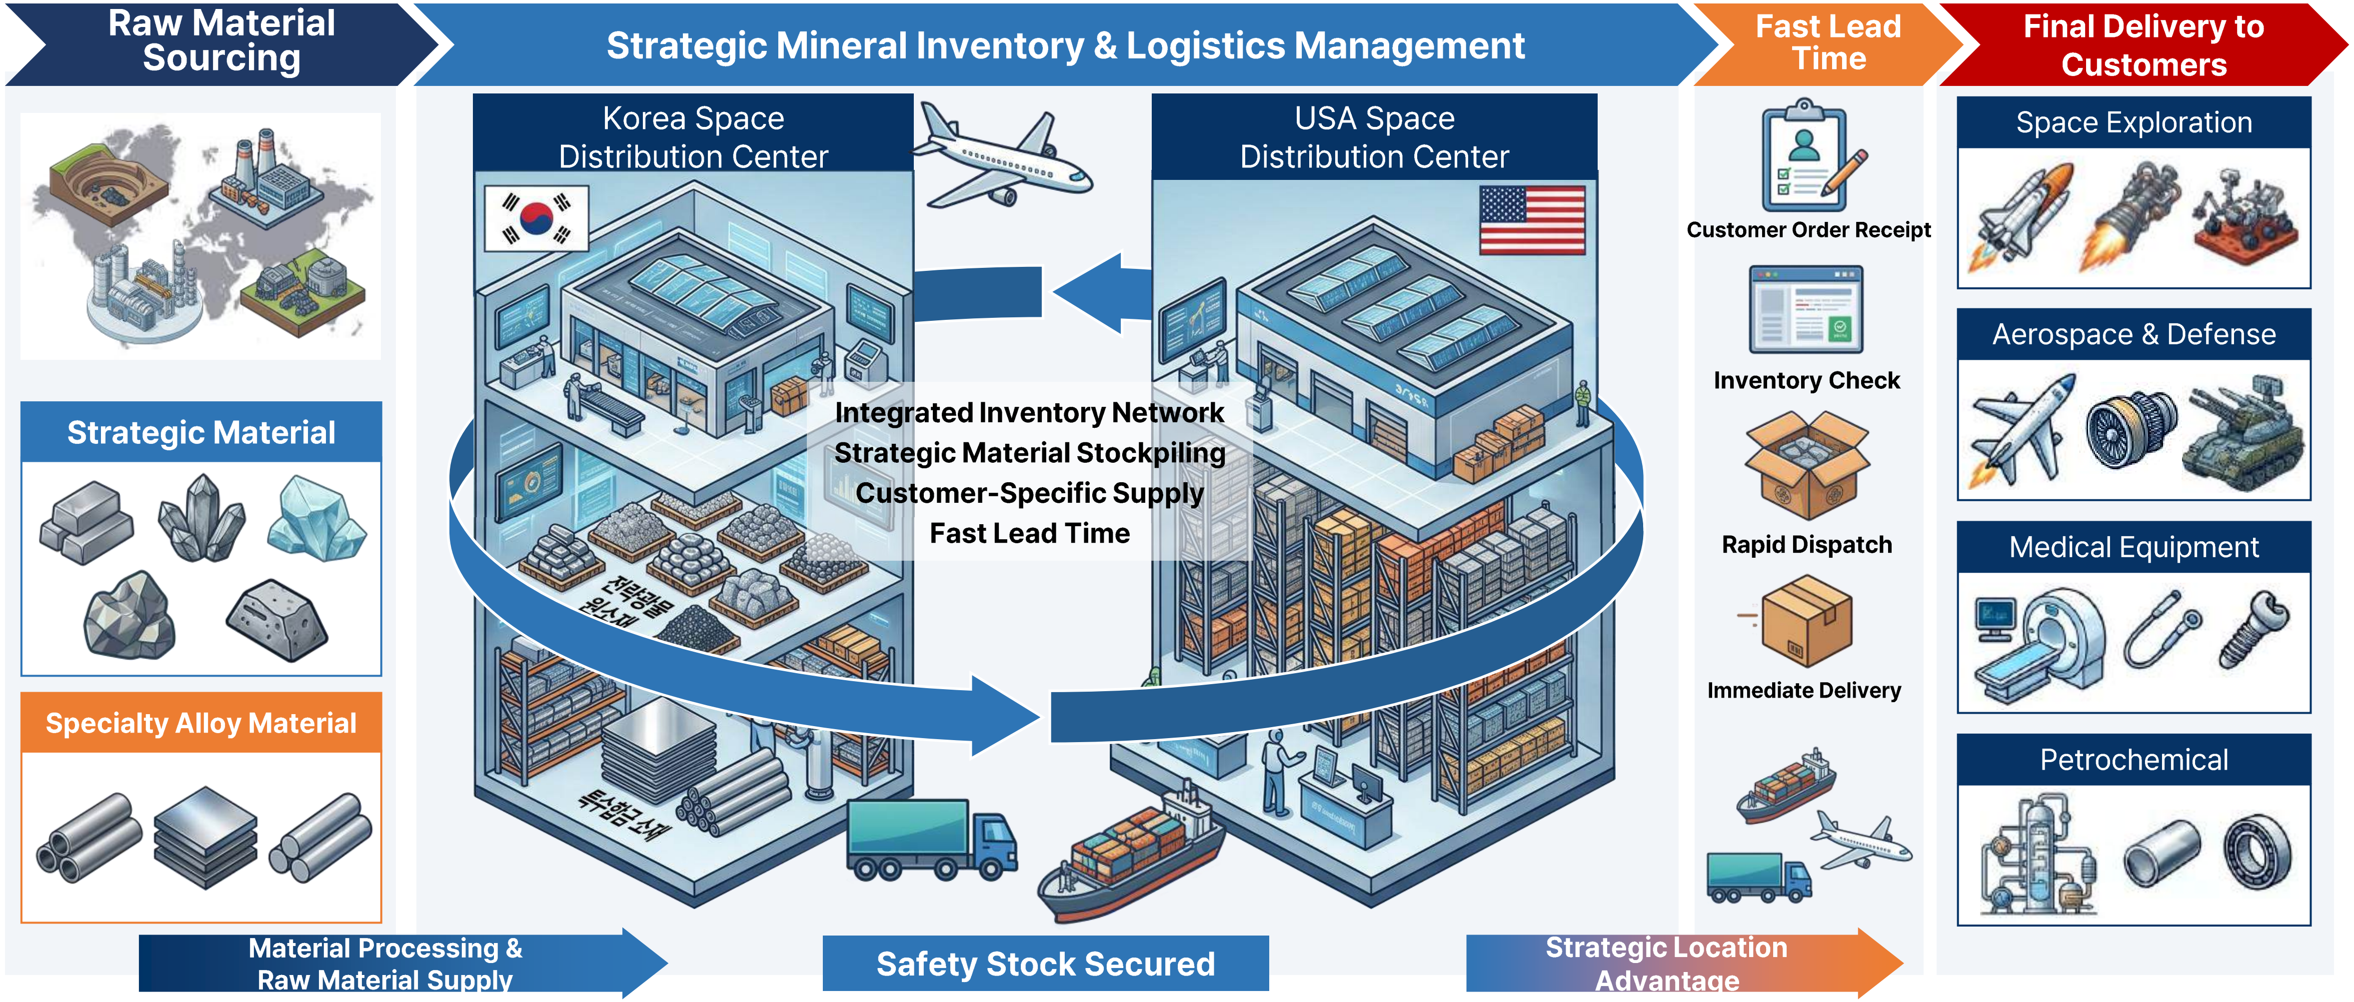
As of June 30, 2026



# 02. Business Model

# Specialty Alloy End-to-End SCM

- Sphere engages from the material specification stage, designs the appropriate global mill vendor network and processes, and manages the entire supply chain from raw material sourcing through processing, quality, inventory, and delivery.



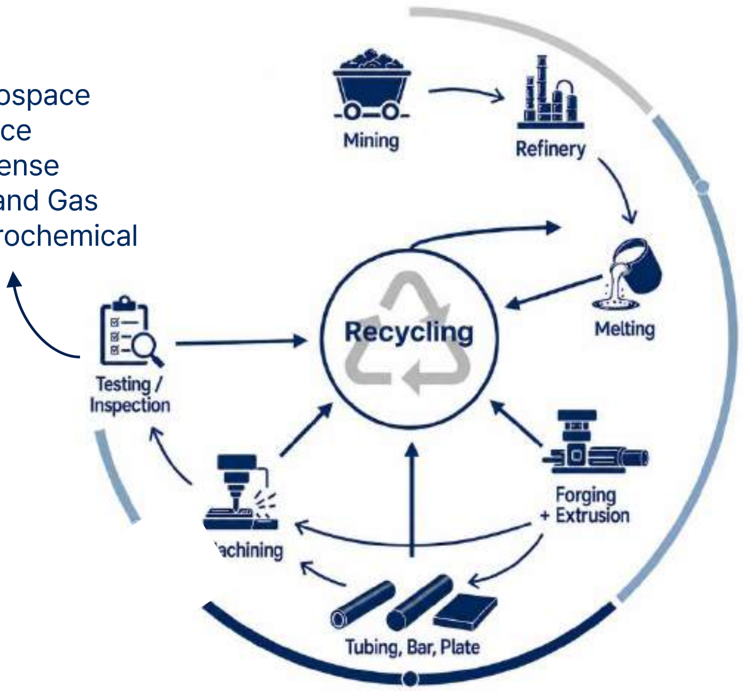
※ The above reflects current plans and may change depending on business conditions and implementation progress.

# Value Chain (1/2)

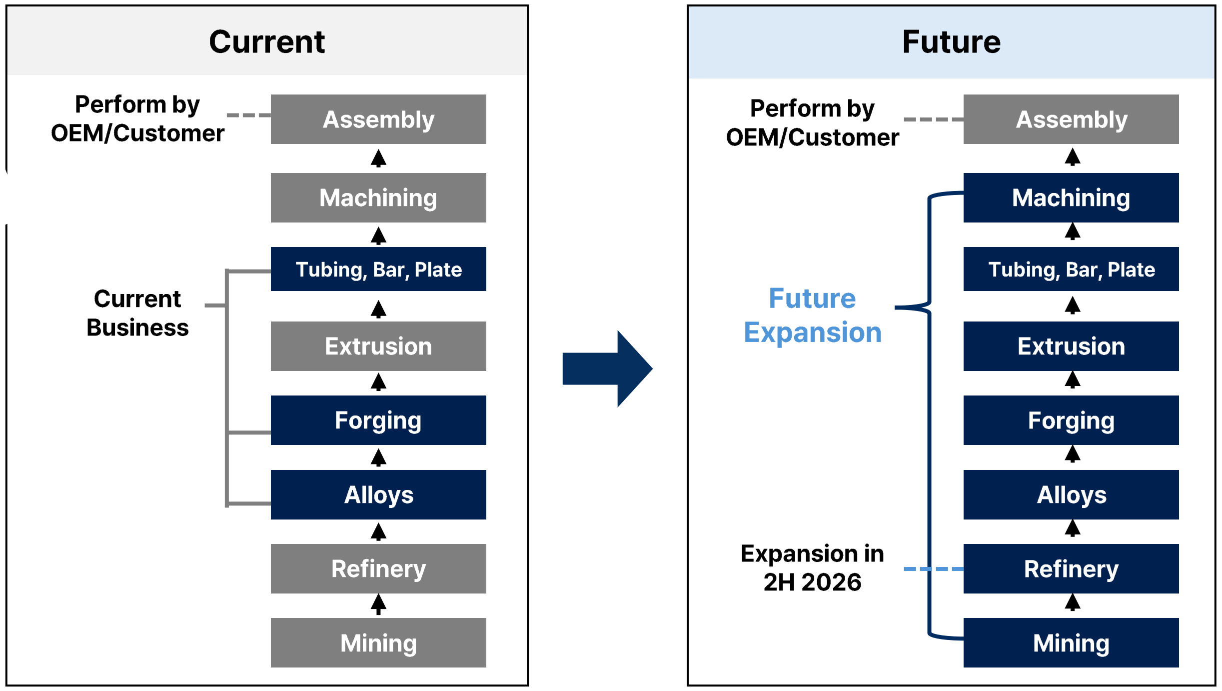
- Sphere aims to expand across the specialty alloy value chain and build an integrated supply chain that can supply customers through a more comprehensive value chain.

## Value Chain

- Aerospace
- Space
- Defense
- Oil and Gas
- Petrochemical

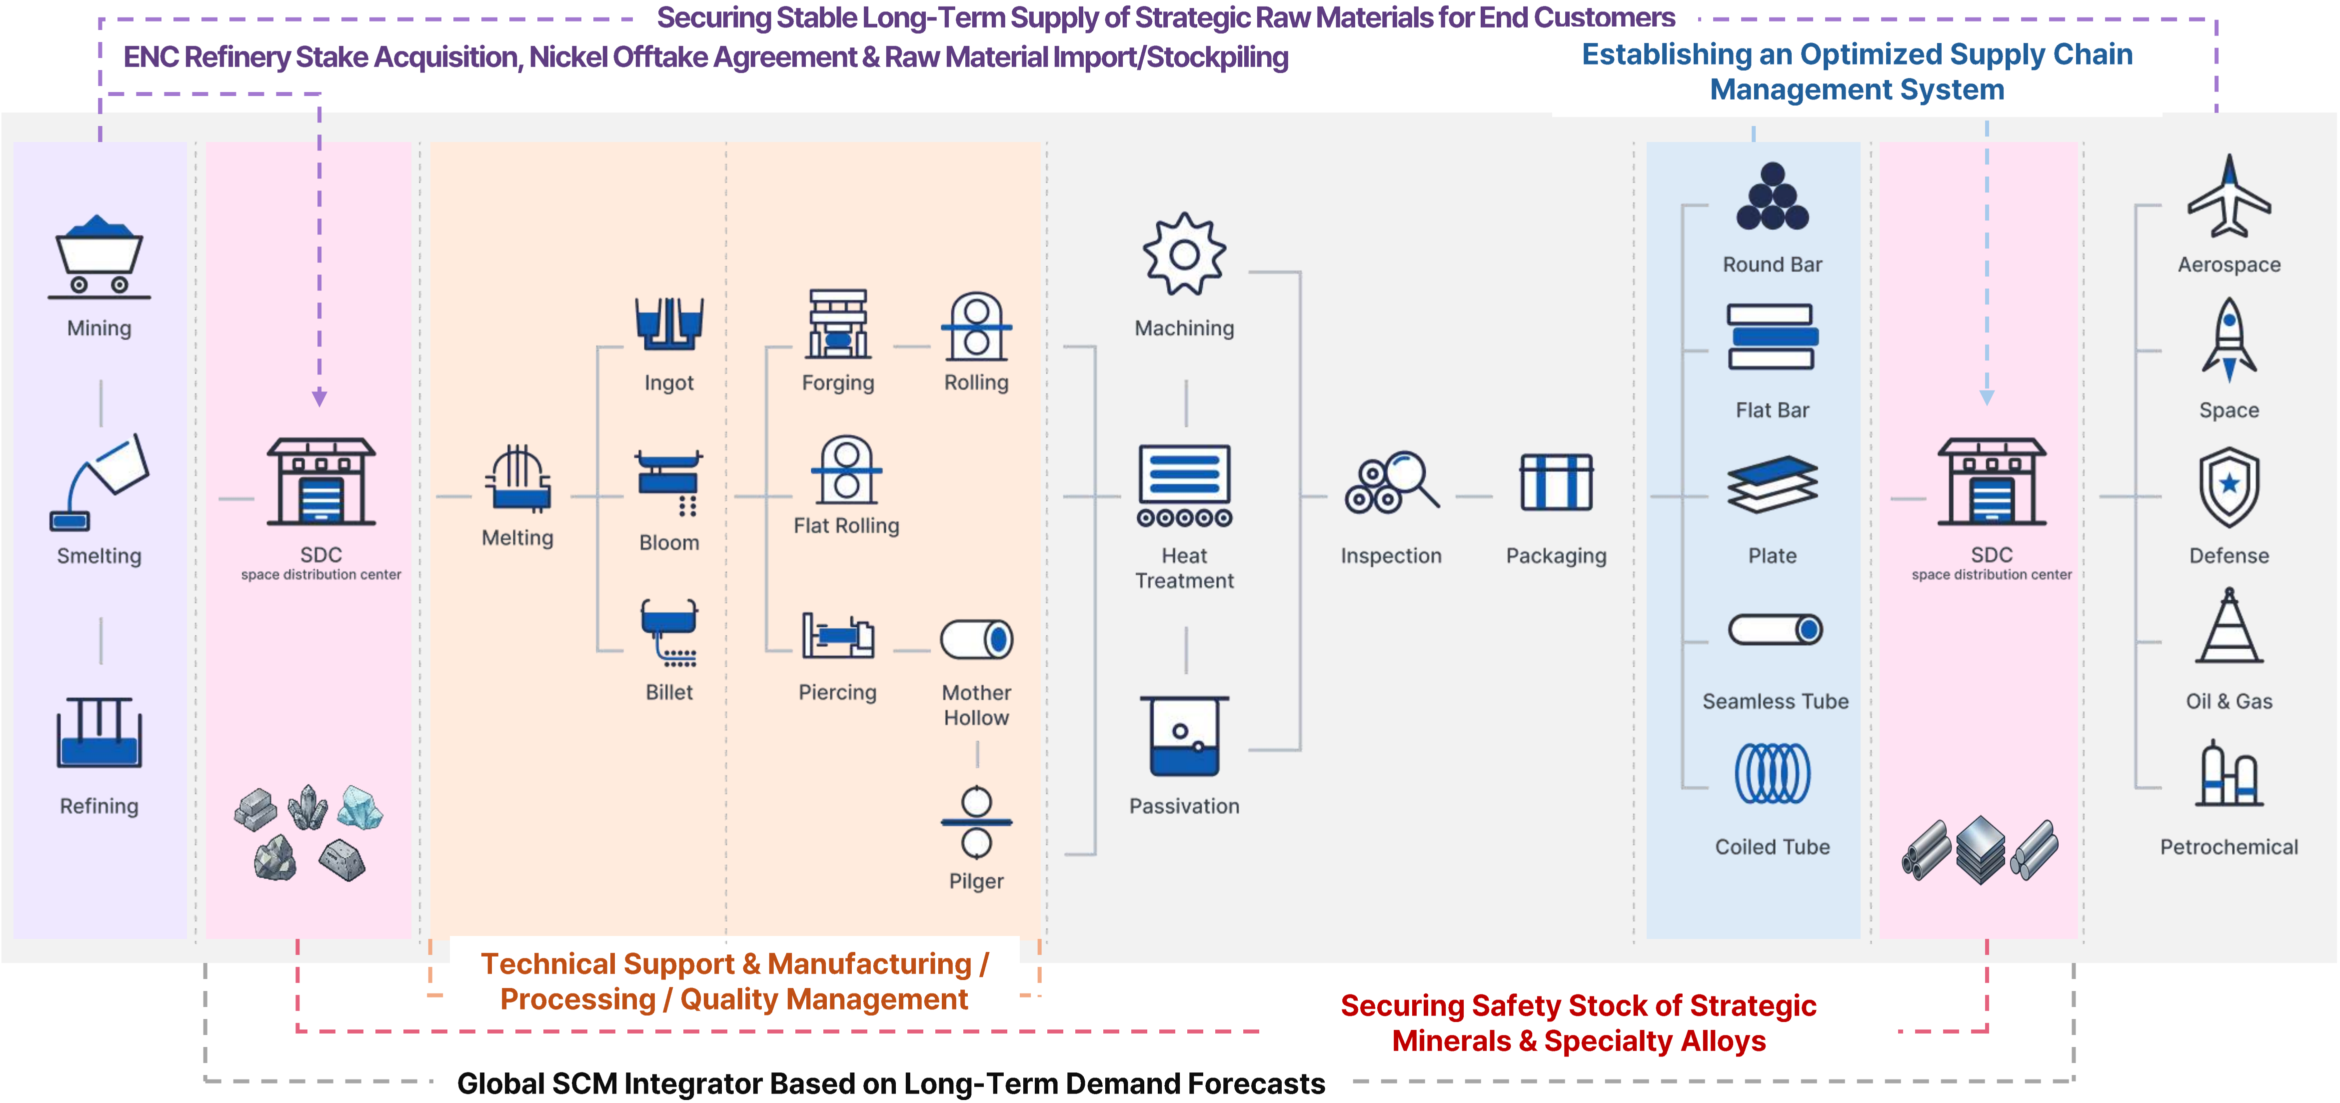


## Full Vertical Integration



※ The above reflects current plans and may change depending on business conditions and implementation progress.

# Value Chain (2/2)



# SCM Subsidiaries, and Global partners

- By closely linking the roles of Sphere, its subsidiaries, and global partners, the Company strengthens supply stability and delivery responsiveness.

**Customer Development & Global SCM Management**

- Global customer development & order management
- Overall SCM strategy
- Demand, delivery & inventory management
- Optimal supply-chain & vendor configuration

**External Partner Network**

Sphere Nickel Cobalt (Singapore)

**Nickel Raw Material & Upstream Supply**

Strategic base for raw material sourcing and upstream capabilities

- Nickel raw material sourcing base
- Upstream partner network development
- Enhanced supply stability
- Strategic raw material sourcing base

The Special Metals (Korea)

**Domestic Processing, Distribution, Inventory & SDC Operations**

- Domestic processing & post-processing
- Distribution & inventory operations
- Customer-specific inventory response
- SDC execution & operations

HVM, TRIS, HAD ...

**Global Mill Vendor Network**

- Sourcing from customer-approved vendors
- Securing long-term agreements / production capacity
- Ensuring quality, delivery & volume stability

# Application Areas

- Specialty alloys are high-performance industrial materials used in extreme temperatures, high-pressure, and corrosive environments, serving as critical materials across the aerospace, space, energy, and defense industries.

## Aerospace

High-temperature, high-pressure aircraft engines & structures

**Key Applications**

Aircraft engines, turbine blades, structural parts

## Space

Launch & propulsion systems in extreme environments

**Key Applications**

Rocket engines, combustion chambers, turbo pumps

## Defense

High-strength, impact-resistant tactical equipment and protective systems

**Key Applications**

Armored vehicles, missile casings, naval vessel structures

## Petrochemical

Chemical processing equipment for high-temp, corrosive environments

**Key Applications**

Heat exchanges, reactors, piping systems

## Oil and Gas

Energy equipment for high-pressure and offshore environments

**Key Applications**

Drilling equipment, valves, Pump components

# Global Network & Footprint

- Sphere operates its specialty alloy supply chain through a global vendor network and business footprint across key regions, including North America, Europe, and Asia.
- Regionally distributed manufacturing, processing, storage, sales, and technical support capabilities enable stable sourcing, fast delivery response, and supply risk diversification.

**Legend**

- Manufacturing site
- Office
- Warehouse
- Sales & Technical support
- Refinery & Smelting

# Fast Delivery & Customer Responsiveness

- Based on extensive SCM execution experience, Sphere has established a standardized operating framework and works closely with customers, vendors, and internal teams to respond quickly to changes in specifications, volume, and delivery schedules.

## Deep Customer & Supply Chain Knowledge

### 01 Close connection to the customers

- Clear understanding of volume, lead time and technical requirements
- Early identification of changing customer needs

### 02 Customer-to-Supplier Alignment

- Accurate translation of customer requirements
- Standardized and traceable execution

### 03 Customer-First Prioritization

- Sourcing and delivery aligned with customer priorities
- Rapid response to changes in demand and schedules

| Shortest industry lead time | Competitive Cost | Optimum Quality | Flexibility |
| --- | --- | --- | --- |

# Flexible, Scalable Light-Asset Model

- Sphere builds optimal supply networks based on customer demand and delivery technical requirements by leveraging technical knowhow, global specialized vendors’ production capacity and technical capabilities.
- By flexibly combining multiple vendor networks and processes, Sphere responds to demand changes while focusing on high-value areas such as customer expansion, inventory, and supply-chain optimization.

### 1. Low Capital Intensity

Leverages global specialized vendors’ production capacity and technical capabilities to secure large-scale supply without heavy capex

### 2. Flexible Product Response

Quickly reconfigures the optimal vendor mix based on customer volume, delivery, and processing-spec changes

### 3. Scalable Production Capacity

Adjusts production volumes and process combinations across multiple vendors as demand grows, without direct facility exp ansion

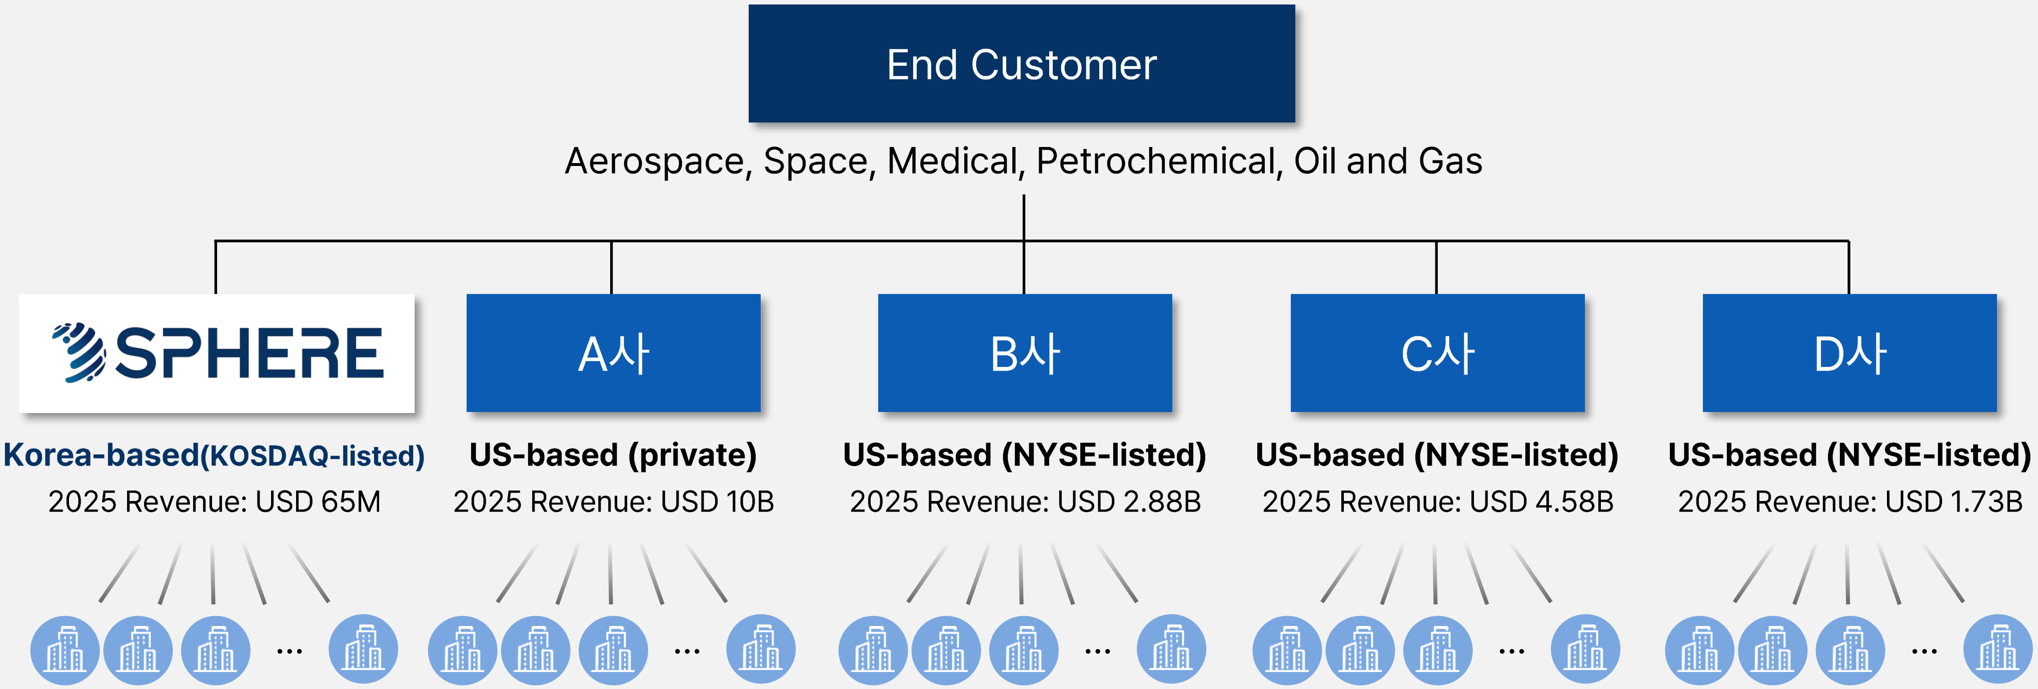
### 4. Efficient Capital Allocation

Growth capital is selectively allocated to inventory, customer expansion, supply chain strengthening, and strategic capabilities, with targeted investment in differentiation and supply stability.

# **Key Vendor Status** (Specialty Alloy segment)

## Aerospace Specialty Alloy Supply Chain Structure (Example)

- Beyond metal distribution, Sphere participates in defining material specifications and technical reviews based on customer requirements, develops and strengthens global supply chains, and manages the entire supply chain across delivery, quality, and cost.



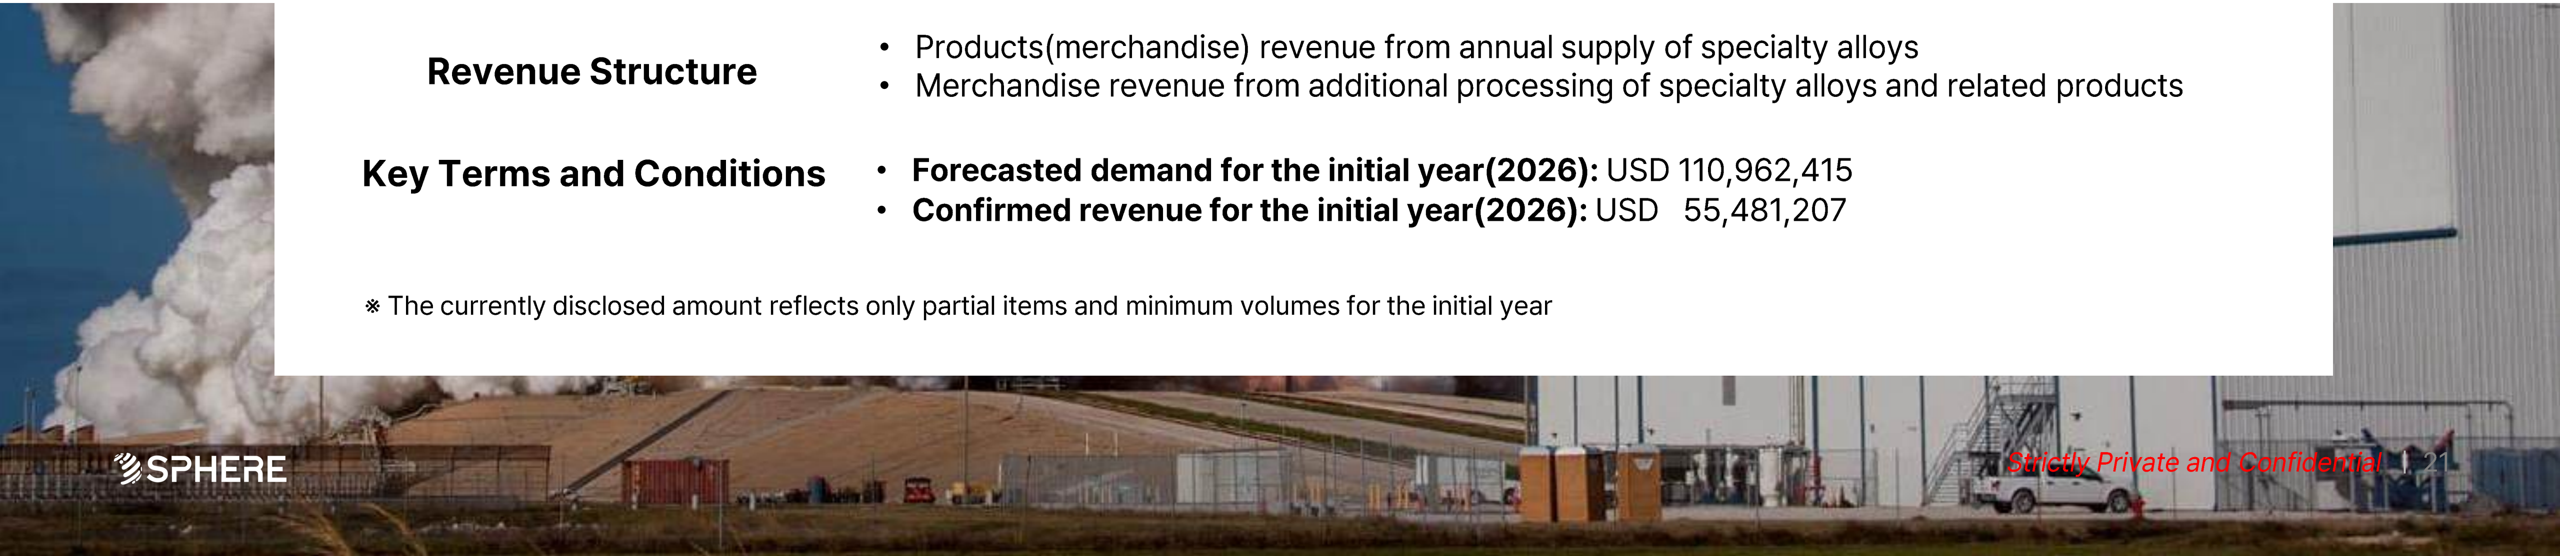
# LTA with a Leading Global Aerospace Company

- On July 31, 2025, Sphere entered into a 10-year long-term agreement to supply specialty alloys to a leading US-based aerospace company through 2035, and disclosed it as "Material Management Information Related to Investment Decisions."
- Supply began in 2026 based on the customer's mid- to long-term demand outlook, with annual volumes and revenue expected to increase gradually as the customer's business and demand expand.

## Material Management Information related to Judgement of Investment
**(Disclosure Date: July 31, 2025)**

| | |
|---|---|
| **Contract Period** | 10+3 years |
| **Contract Products** | Specialty alloys including nickel and super alloys |
| **Revenue Structure** | • Products(merchandise) revenue from annual supply of specialty alloys<br>• Merchandise revenue from additional processing of specialty alloys and related products |
| **Key Terms and Conditions** | • **Forecasted demand for the initial year(2026):** USD 110,962,415<br>• **Confirmed revenue for the initial year(2026):** USD 55,481,207 |

※ The currently disclosed amount reflects only partial items and minimum volumes for the initial year



# Order Status

- Since the merger, orders from global customers have continued to grow, led by the specialty alloy supply business, with cumulative disclosed orders exceeding KRW 350B.
- Backed by stable access to key materials and global SCM capabilities, new orders continue to flow in, expanding the cumulative order backlog and providing a solid foundation for stable revenue growth.

## Cumulative Disclosed Order Intake (post-merger)

(Unit: mn USD, mn KRW)

| Category | USD ($) | KRW (₩) |
|---|---|---|
| Q1 2025 | Excluded from aggregation as pre-merger figures | Excluded from aggregation as pre-merger figures |
| Q2 2025 | 34mn USD | 51,319KRW |
| Q3 2025 | 36mn USD | 53,968KRW |
| Q4 2025 | 31mn USD | 46,244KRW |
| **Total** | **101mn USD** | **151,531KRW** |

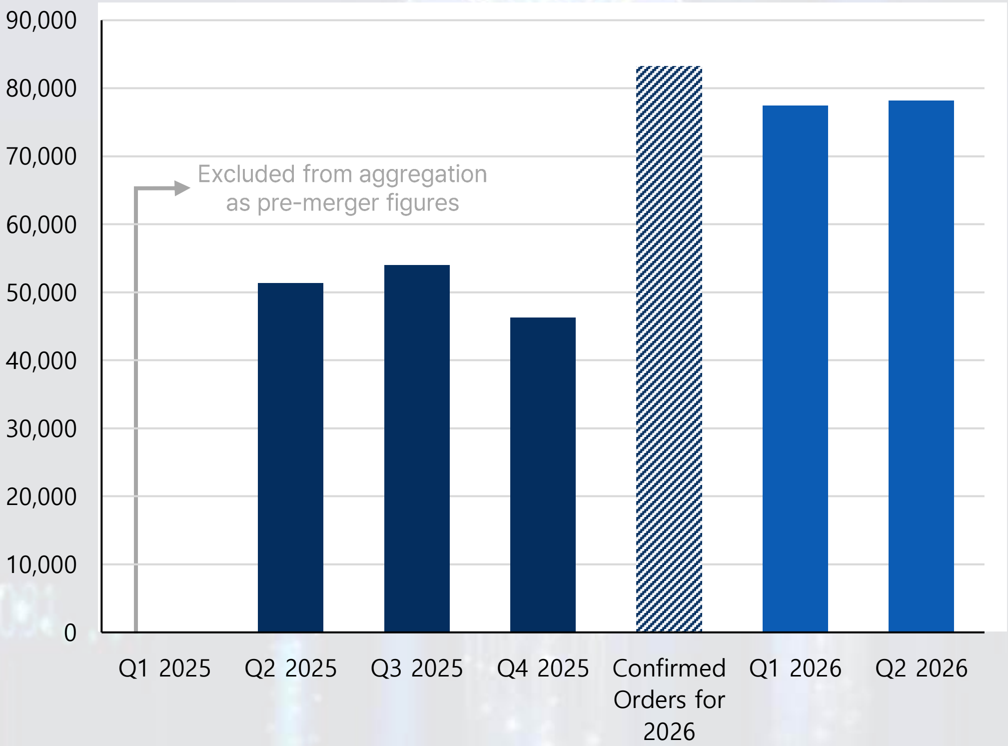
※ The above amounts represent order intake disclosed after the merger

| Category | USD ($) | KRW (₩) |
|---|---|---|
| Confirmed Orders for 2026 | 55mn USD | 83,222KRW |
| Q1 2026 | 52mn USD | 77,471KRW |
| Q2 2026 | 52mn USD | 78,179KRW |
| **Total** | **159mn USD** | **238,871KRW** |

Note: The above amount is based on the semiannual report as of June 30, 2026.

## Quarterly Cumulative Disclosed Order Intake (post-merger)

(Unit: mn KRW)



SPHERE

# Strategic Partnerships & Supply Stability

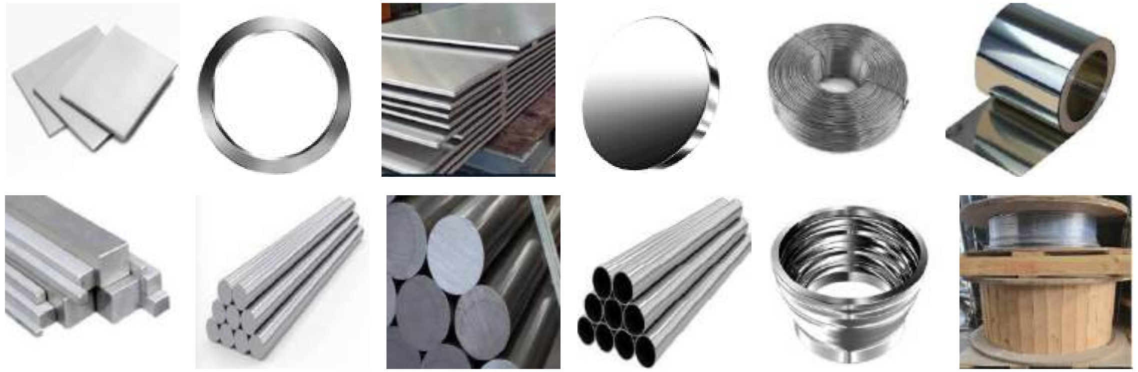
- Secures key execution capabilities across the specialty alloy supply chain by assigning vendor roles across raw materials, precision tubes, processing, distribution, and other functions
- Builds a stable supply structure that supports customer demand growth and ensures timely delivery through stable sourcing based on long-term agreements

**Mill Vendors**

SPHERE ---- a | b | c | d | e | f | g | h | ••• | z

| Production Capacity Secured | Delivery Stability Enhanced | Supply Risk Mitigation | Scalability Secured |
|---|---|---|---|
| Pre-secures long-term production slots and volumes | Builds a delivery structure through processing and distribution | Diversifies sourcing across multiple vendors | Builds a foundation for phased expansion of volume and product categories |

- Specialized partner network across raw materials, precision tubes, processing & delivery
- Pre-secured production slots & volumes under long-term agreements
- Multiple qualified vendors enhance quality & delivery stability and diversify supply risk
- Flexible production capacity for demand growth & product expansion
- Stable delivery through stronger resilience to bottlenecks & price volatility



# Automation through ERP & EDI Integration

- Standardizes and automates supply-chain data—including orders, specifications, prices, inventory, logistics, delivery, and change history—to build a systematic data accumulation framework.
- Integrates accumulated data from the early business stage to the present and is developing systems for real-time data linkage with customers.
- Builds a data-driven SCM framework that supports proactive decision-making by forecasting raw material prices, logistics routes, and delivery changes based on accumulated data.

## Real-Time Customer Data Integration

### INPUT

**Supply Chain Source Data**

Orders | Specs
Prices | Inventory
Logistics | Delivery
Change History | Others

Decentralized · Manual Management

### ERP (Enterprise Resource Planning)

**Internal Records · Standardization · Automation**

- Integrated management of orders, prices, inventory & delivery history
- Automated data flow across departments
- Shift from individual experience to system-based operations

**Customer EDI Integration**

### EDI (Electronic Data Interchange)

**Standardized & Automated External Data Linkage**

- Automated exchange of customer/vendor information
- Standardized order, inventory & delivery procedures
- Eliminates manual entry, duplicate transmission & missing data

### Integrated Data Accumulation

**Standardized & Integrated Data**

**Orders · Specifications · Prices Inventory · Logistics · Delivery Change History, etc**

**Integrated and accumulated under a single standard**

### OUTPUT

**③ Current Benefits — Operational Efficiency**

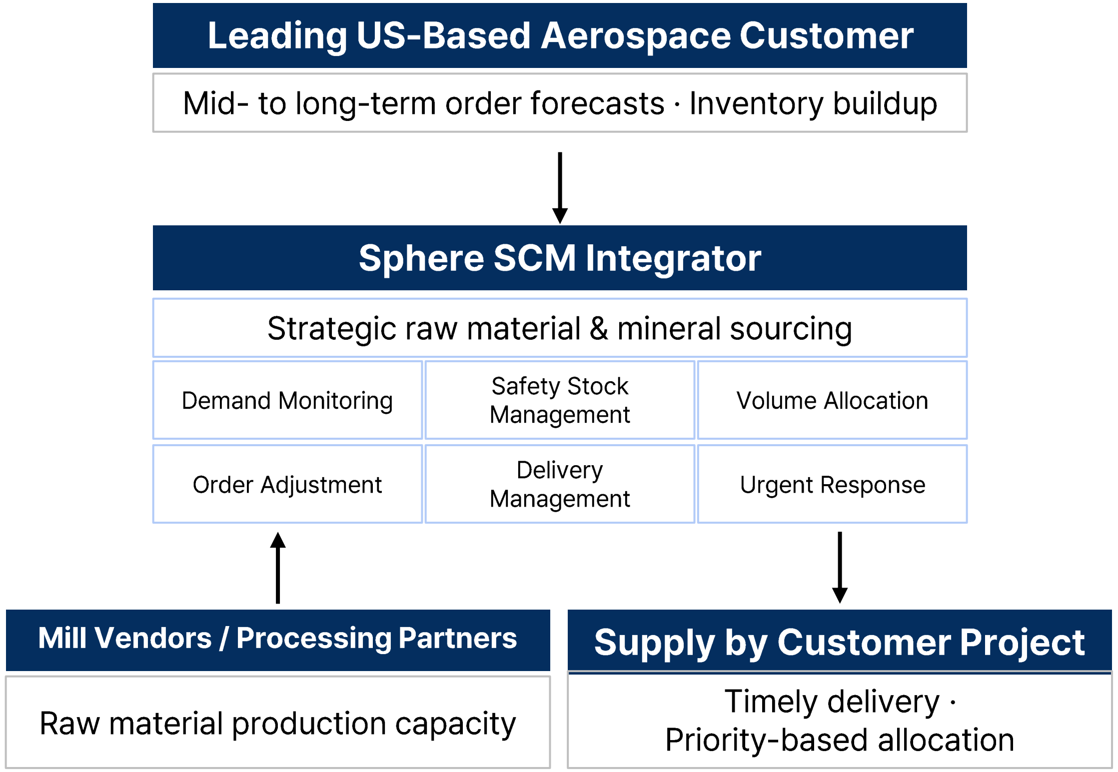
- Fewer input errors · Shorter processing time
- Greater accuracy of current status, change history & traceability
- Clearer operational accountability

**④ Future Enhancement — Data-Driven**

- Forecasting raw material prices, logistics routes & delivery changes
- Data-driven SCM optimization & proactive response

# Safety Stock Management & Operations

- Establishes a stable supply framework through agreements with a leading US-based aerospace company on safety stock management and operations
- Plans production and inventory based on the customer's mid- to long-term orders and delivery schedules
- Pre-secures appropriate inventory levels for key items to strengthen responsiveness to demand changes and delivery requirements



## Lead Time Reduction

Fast response through pre-secured inventory and shipment readiness

## Enhanced Supply Stability

Mitigates quality and supply-delay risks from demand and supply fluctuations

## Stronger Response to Demand Changes

Flexibly manages inventory and supply volumes based on project schedules and customer demand

## Expanded Role in Customer Supply Chain

Extends beyond product supply to integrated inventory management and timely delivery

# AS9120B Certification

- Obtained AS9120B (EN 9120:2018) certification, validating the quality management system for the purchasing, storage, and distribution of aerospace parts against international standards
- Meets the quality, traceability, and supply management requirements of global aerospace customers, strengthening the foundation for new customer expansion and the specialty alloy supply business

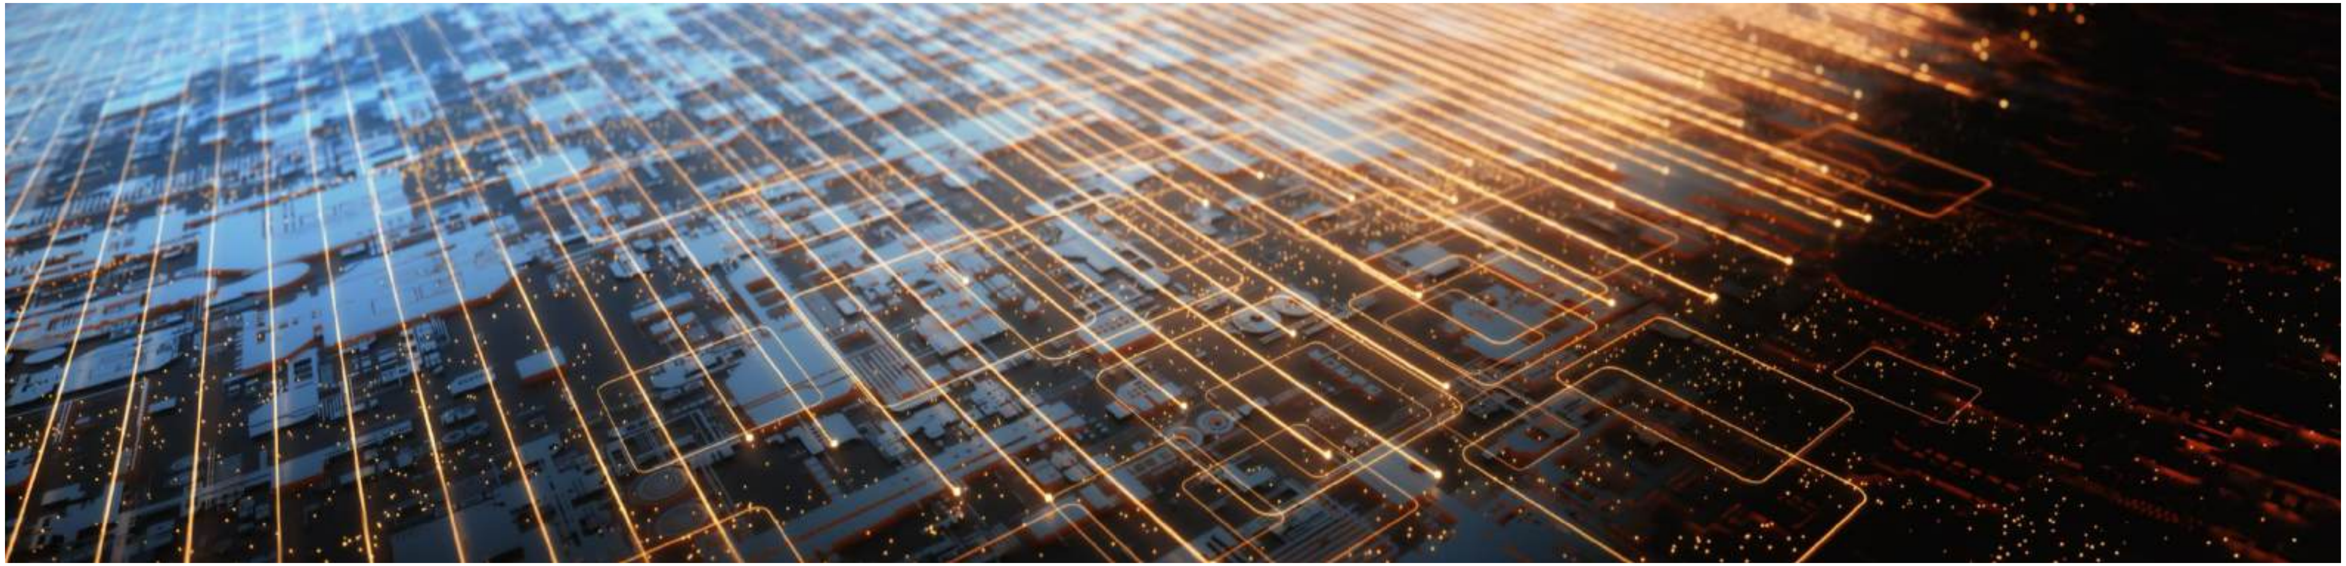
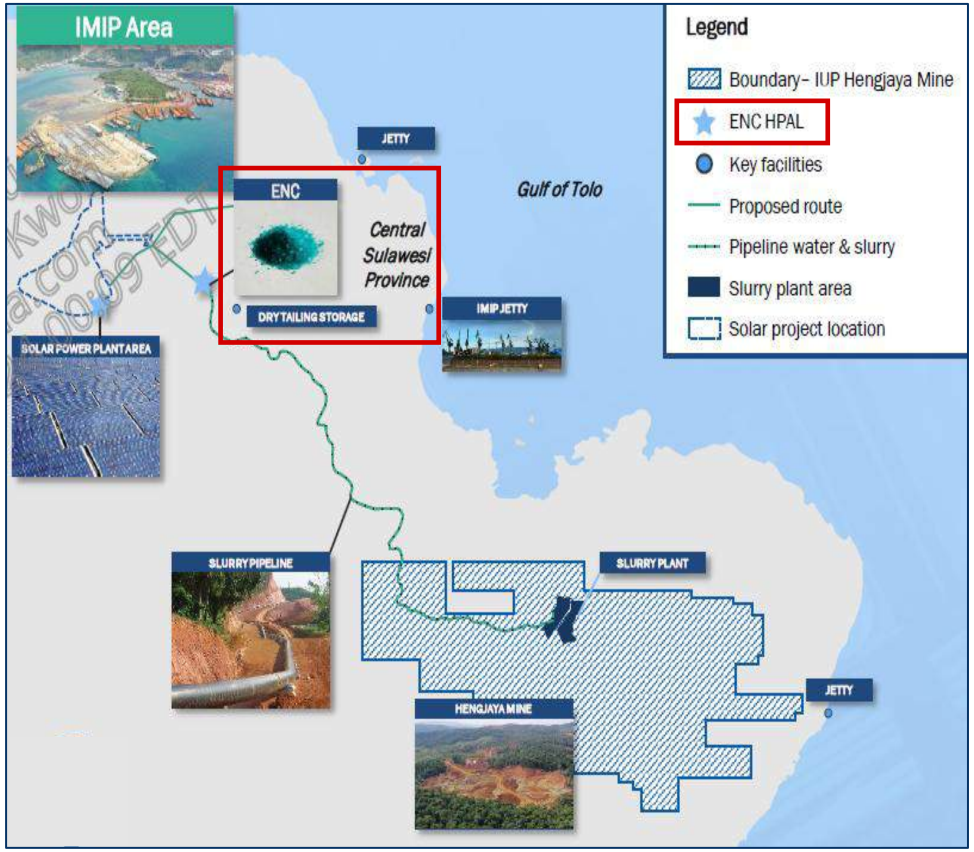
# 04. Growth Strategy



# ENC Refinery

- The ENC refinery is the Excelsior Nickel Cobalt Project, an HPAL nickel refinery located in the Indonesia Morowali Industrial Park (IMIP) in Sulawesi, Indonesia, targeting commercial production from Q3 2026 onward.



| Category | Details |
|---|---|
| Project Name | ▪ Excelsior Nickel Cobalt Project ("ENC") |
| Location | ▪ Indonesia Morowali Industrial Park (IMIP) |
| Total CAPEX | • [1,793] USD mn |
| Technology | • HPAL(High Pressure Acid Leach) |
| Key Products | ▪ Class 1 Nickel products (MHP, Nickel Sulfate, **Nickel Cathode**) |
| Capacity | ▪ Annual Nameplate: 67,000 tons |
| Trial Production | ▪ Q2 2026 |
| Commercial Production | ▪ Q3 2026 |
| EPC | ▪ Decent Resource of the Tsingshan Group (China) |
| Shareholder | ▪ Nickel Industries Limited. (Australia, listed)<br>▪ Decent Resource |
| Guarantee | ▪ Decent Resource guarantees Capex and Nameplate |
| Offtake Contract | ▪ Provide shareholders with nickel offtake equal to their equity stake |
| Ore Supply | ▪ Signed a long-term supply contract with Hengjaya Mine, which is 80% owned by NIC (Ore supply price: HPM) |
| ESG Compliance | ▪ Compliance to global ESG requirements and reducing carbon emissions |

# ENC Refinery Progress & Production Schedule

- With major production facilities and infrastructure nearing completion, ore feed was scheduled to begin in Q2 2026, followed by sequential commissioning of the acid plant, autoclaves, and refining / extraction circuits.
- Following staged commissioning, commercial production of MHP and nickel products is targeted from mid-Q3 2026.

**• Overview of IMIP, Sulawesi, Indonesia**

**• ENC Refinery Site within IMIP**

**• PT Hengjaya Mine supplying nickel ore to the ENC refinery**(NIC 80.0% ownership)

**Q2 2026**

**First Ore Feed & Commissioning Start**
- Ore feed to the Limonite Feed Preparation Plant
- Phased commissioning of key ENC processes

**Commissioning of Core Production Facilities**
- Acid plant ignition and first autoclave commissioning
- Slurry transfer from Hengjaya Mine to the ENC refinery after autoclave commissioning
- Commissioning of refining / extraction circuits from June

**Q3 2026**

**MHP Production** (Expected)
- Autoclave ore feed
- ENC refinery MHP production

**Class-1 Nickel Production** (Expected)
- Nickel cathode production
- Build foundation for LME[1] and SHFE[2] registration following production start

(*1) LME(London Metal Exchange)
(*2) SHFE(Shanghai Futures Exchange)

**Q4 2026**

**Nameplate Capacity Target** (Expected)

Source: Nickel Industries

# ENC Refinery Stakeholders & Ownership Structure

- The ENC refinery is a joint venture project involving major shareholders including Nickel Industries, Tsingshan, and Sphere, together with local operating entities.
- The project integrates each participant's nickel capabilities with the specialty alloy supply chain.

| Category | Contents |
|---|---|
| NICKEL INDUSTRIES<br><Largest Shareholder> | • World's 6th-largest pure-play nickel producer listed on the Australian Securities Exchange (ASX)<br>• Strengthening its position in the global nickel market through production expansion and cost efficiency in cooperation with China's Tsingshan Group<br>• Holds a final 46.0% stake in EII following an additional acquisition of Tsingshan's stake |
| 鼎信集团 DECENT<br><2nd Largest Shareholder> | • A wholly owned subsidiary of Tsingshan, the world's largest stainless steel and nickel producer<br>• Produces nickel through mining projects, including those in Indonesia<br>• Holds a final 44.0% stake after selling its stake in NIC, for the purpose of supplying nickel to US aerospace companies |
| SPHERE<br><3rd Largest Shareholder> | • Through SNC's acquisition of a 10.0% stake in EII, TSM Corp. secures nickel purchase rights linked to the equity stake, establishing a stable raw material sourcing base<br>• Links sourced high-quality Class 1 nickel with domestic mill vendors to produce high-performance specialty alloys and supply them long term to a leading US-based aerospace company, strengthening the competitiveness and scalability of its aerospace materials value chain |
| EII<br><Holding Co.> | • Holding company for the ENC HPAL refinery located within IMIP<br>• The refinery was developed through a joint investment by NIC and the Tsingshan Group, with nickel production scheduled from Q3 2026 |

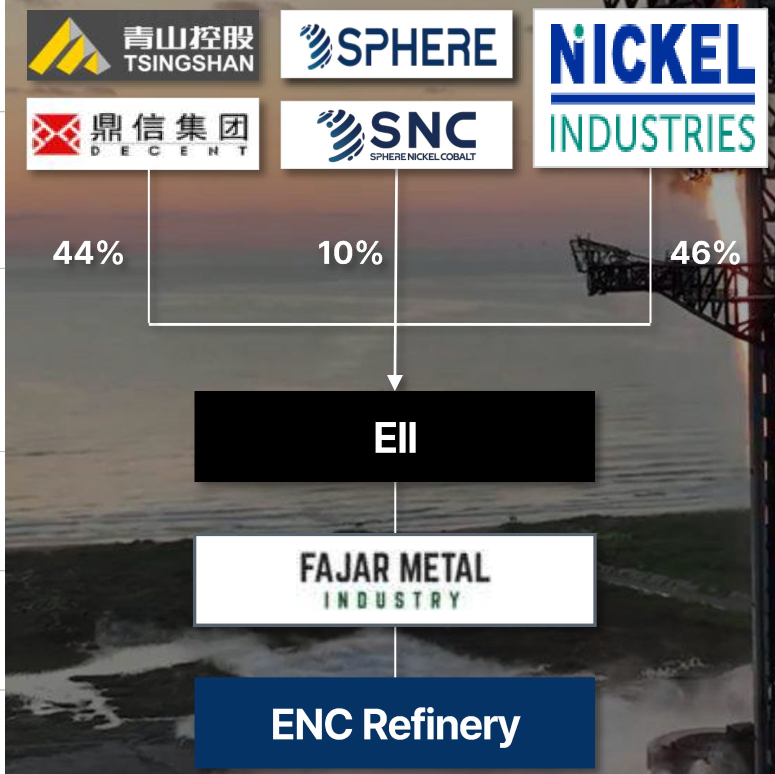
## ENC Ownership Structure



SPHERE

# SNC Overview & Business Structure

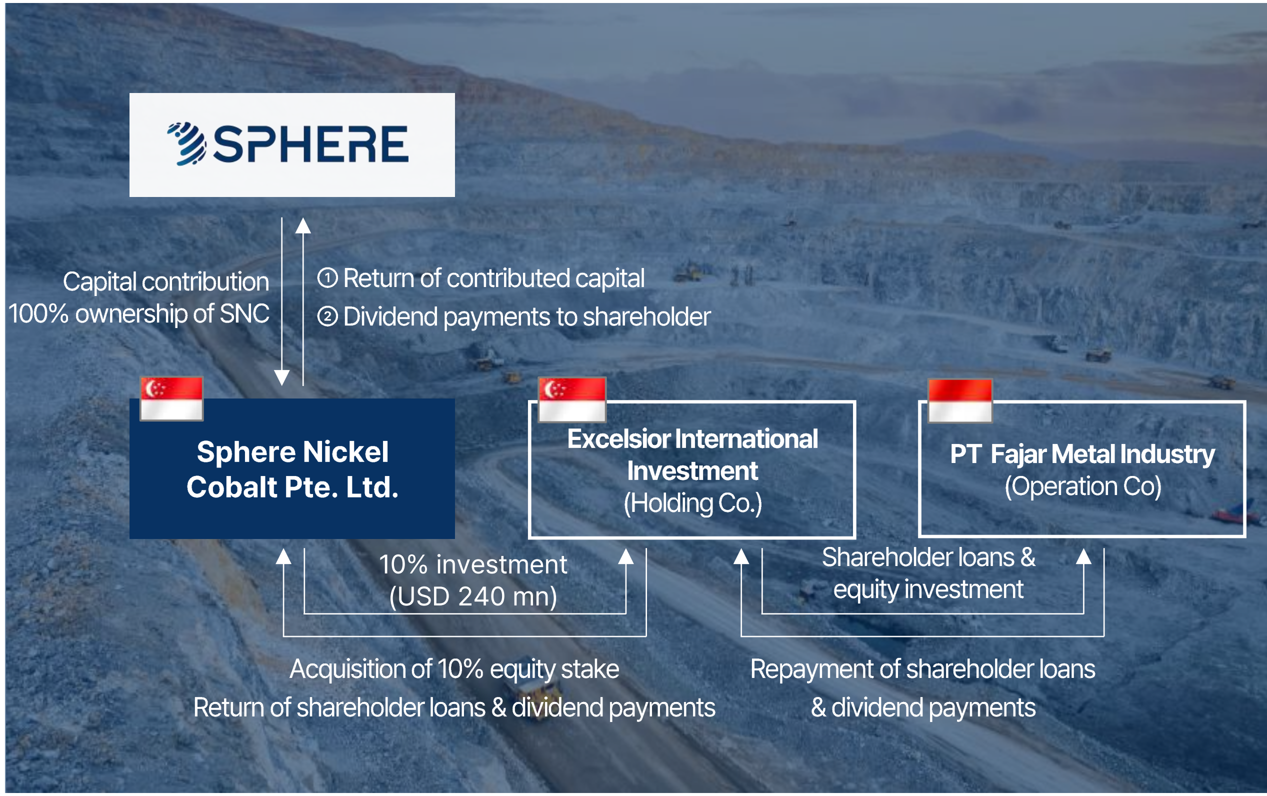
- Sphere Nickel Cobalt Pte. Ltd. ("SNC") is a special purpose vehicle established in Singapore to acquire a 10% stake in the ENC refinery in Indonesia.
- SNC is responsible for executing the project investment and managing the equity stake, with future dividend income and investment recovery expected.

| Category | Details |
|---|---|
| **Company Name** | • Sphere Nickel Cobalt Pte. Ltd. (Singapore) |
| **CEO** | • Harrison Choi |
| **Established** | • October 13, 2025 |
| **Location** | • South Beach Tower, Singapore 189767 |
| **Parent Company/Shareholder** | • Sphere Corp. (KOSDAQ 347700) 100% |
| **Total Shares Outstanding** | • 69,470,000 shares |
| **Capital** | • USD 77,770,000 |
| **Business Areas** | • Investment in Class 1 nickel & cobalt refinery projects<br>• 10% ownership in the Indonesian ENC refinery and management of related investment assets |

## SNC Shareholding Structure (As of Aug 11, 2026)

SPHERE → 100% (77,770,000 shares) → SNC SPHERE NICKEL COBALT

## Business Model



# Specialty Alloy Value Chain Integration through ENC Investment

- Through an offtake agreement linked to its ENC refinery investment, TSM secures preferential purchase rights to production volumes in proportion to its equity stake.
- A 10% base purchase right plus additional options allows TSM  to secure raw materials equivalent to up to 20% of production capacity.
- Secured volumes will be flexibly allocated across three channels depending on business strategy and market conditions: specialty alloy value chain development, global raw material supply, and international metals market sales.

## Plan A. Vertical Integration

- **Leading US Private Space Company**
  Stable supply based on the LTA
- **Sphere Corp.**
  Supplies products to the strategic customer
- **Mill Vendors**
  Process specialty alloys  tailored to aerospace industry requirements
- **TS Metals**
  Secures production volumes through offtake rights and manages global distribution
- **PT Fajar Metal Industry**
  Produces raw materials for specialty alloys

**End Customer**
↑ **Final Delivery**
SPHERE
↑ **Specialty Alloy Product Delivery**
**Mill Vendors**
↑ **Raw Material Import & Sales**
TSM
**10% + 10%** ↑ **Offtake Right**
**PT FMI**

## Plan B. Integration with Global Raw Material Supply Network

a. Leveraging TS Metals' global network
b. Sourcing to global raw material suppliers

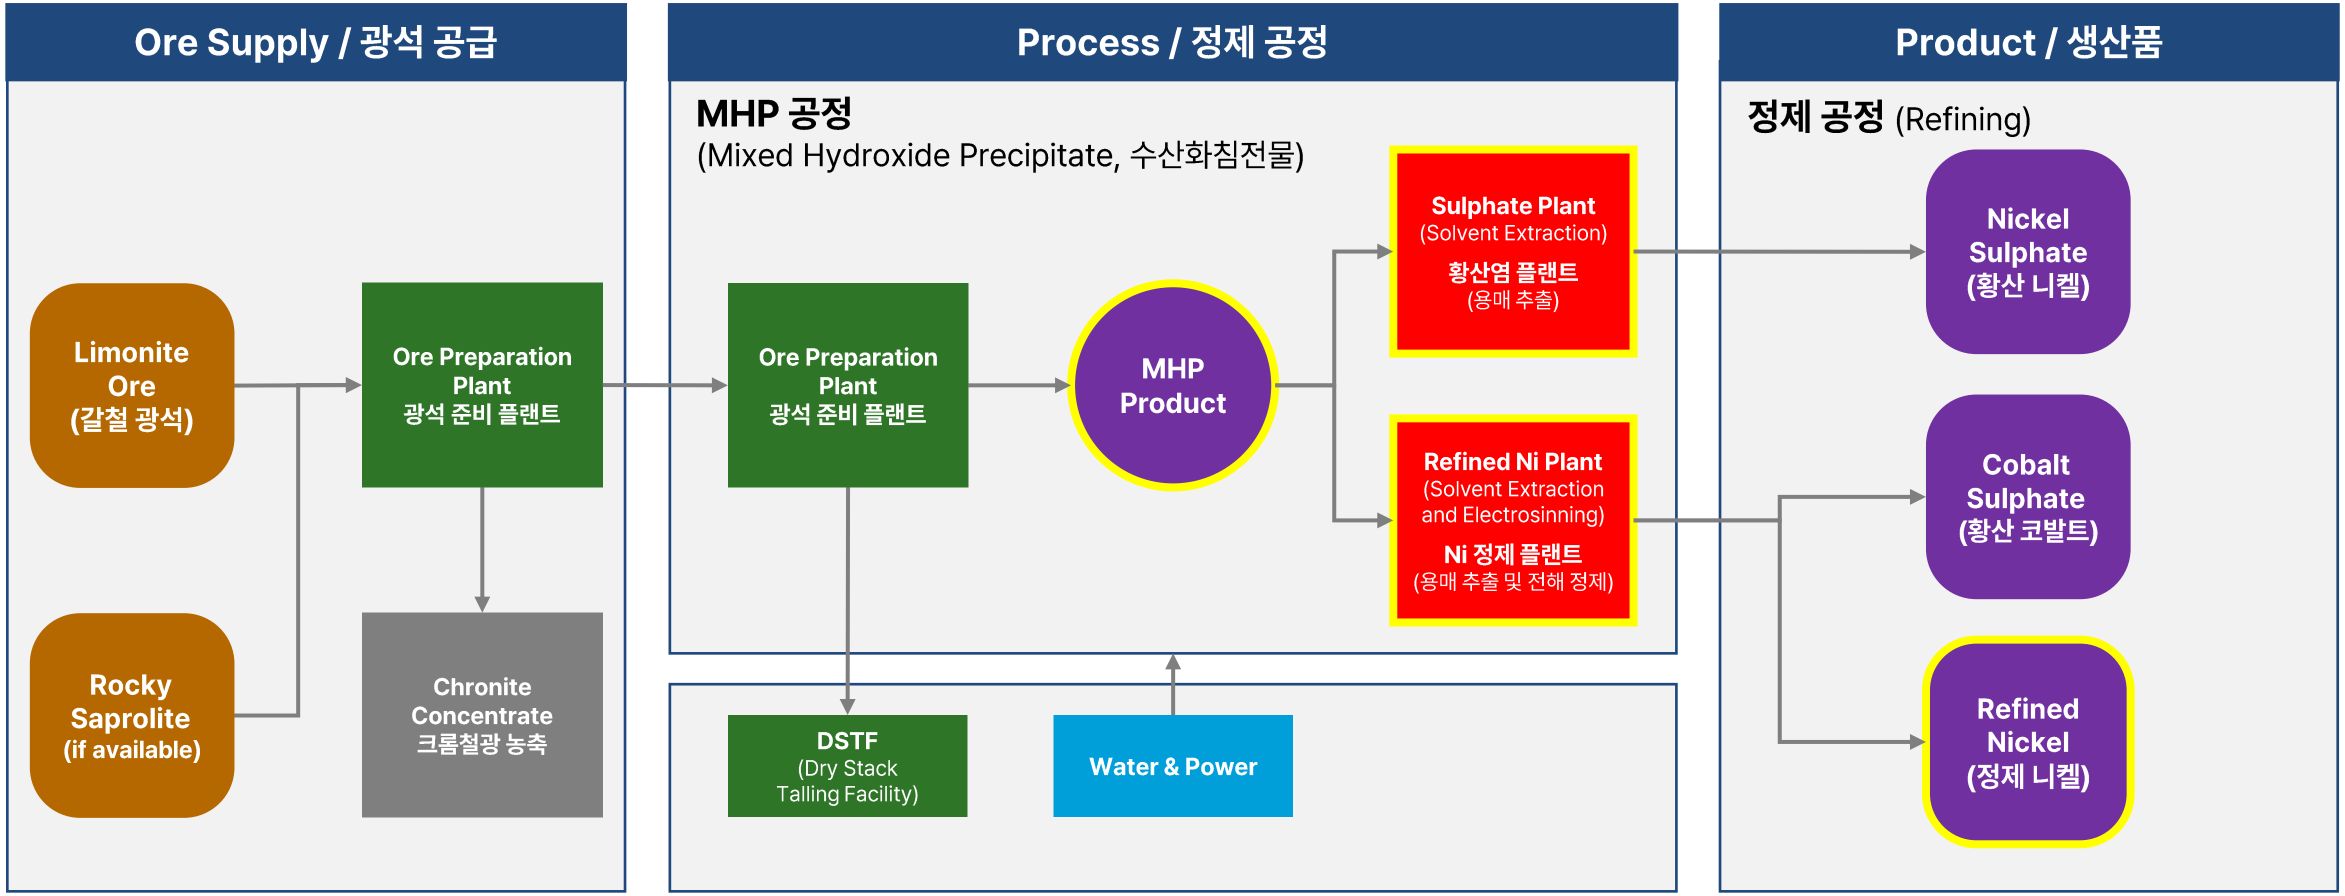
**PT FMI** → TSM → **Global raw material suppliers**

## Plan C. Sales to Global Metals Market (LME)

a. Ensuring high market liquidity
b. Securing readily tradable sales channels
c. Enabling price-based market transactions

**PT FMI** → TSM → LME An HKEX Company

# ENC Process Chart (Summary)



Source: Nickel Industries, DNV

# Supply Chain Stabilization Leading Business Entity

- The government is promoting supply chain stabilization for critical items as a national priority, designating "Leading Business Entities" based on a comprehensive assessment of companies' supply chain stabilization capabilities and business plans, and providing policy, financial, and fiscal support.
- Sphere was recognized for its capabilities to support stable supply of critical minerals and strengthen Korea's supply chain, and was finally selected as a Leading Business Entity in 2H 2025.
- Going forward, Sphere plans to strengthen procurement stability and execution capabilities through diversified import channels, expanded supply infrastructure, and stockpiling.

## Support Directions

| | |
|---|---|
| 01 | **Targeted Support for Items & Services Requiring Policy Support**<br>• Supports stabilization projects for economically critical items and services pursued under Leading Business Entities' supply chain stabilization plans.<br>• Supports projects recognized as eligible by relevant ministries or the Fund Management Deliberation Committee. |
| 02 | **Support for Strengthening Supply Chains of Core Industries**<br>• Supports domestic and overseas supply chain stabilization in key industries including secondary batteries, semiconductors, automobiles, food, and shipping/logistics.<br>• Broadly supports related industries such as food security, mineral refining, resource recycling, and logistics services. |
| 03 | **Greater Policy Effectiveness through Linkage with Policy Finance & Fiscal Programs**<br>• Supplements the capacity constraints of existing policy finance through joint support for large-scale projects and expands available funding.<br>• Links with existing fiscal programs to address diverse financing needs across supply chain stages and create synergies. |

Source: Korea Eximbank

## Key Support Areas

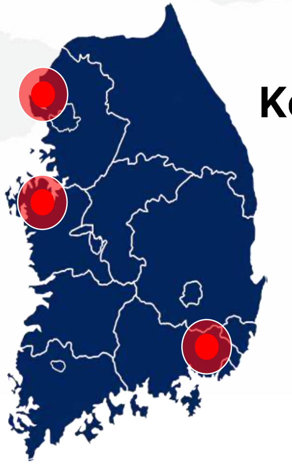
| Category | Related Items & Services (Examples) | |
|---|---|---|
| ③ Advanced Strategic Industries | Secondary Batteries | Cathode materials (precursors, nickel sulfate, lithium hydroxide), rare-earth permanent magnets, electrolytes, separators, pouch materials |
| | Semiconductors & Displays | Rare gases, silicon wafers, photoresists, hydrofluoric acid, fluoropolymers, gallium, blank masks |
| | Pharma & Bio | Bio-buffers, resins, acetonitrile |
| ④ Resource Security | Critical Minerals | Lithium, nickel, cobalt, manganese, graphite, rare earths |
| | Energy | Crude oil, natural gas, uranium, hydrogen |
| ⑤ Essential Goods for the National Economy | Food | Wheat, soybeans, corn, palm oil |
| | Industrial Raw Materials & Equipment | Urea solution, fertilizers, gas turbines |
| ⑥ Logistics Infrastructure & Services | Ports & terminals, storage, stockpiling and distribution facilities, shipping & aviation services (transport infrastructure), and maintenance services | |

# Space Distribution Center

- Sphere is considering the development of an SDC to secure safety stock of strategic minerals and provide customer-specific supply.
- The SDC is expected to establish a stable supply system and improve logistics efficiency through locations close to key demand and supply hubs.

### USA: LA / Texas / Florida

Secure three SDCs near global customer locations in the USA



### Korea: Incheon / Seosan / Busan

Secure one SDC near domestic partner facilities in Korea

※ The above reflects current plans and may change depending on business conditions and implementation progress.

# Space Distribution Center

- In collaboration with a leading US-based private space company, Sphere is pursuing the Space Distribution Center (SDC) project.
- The SDC will secure diversified raw material and material supply sources, establish an optimized logistics system, and enable rapid delivery when customers need products.

### Machining Center

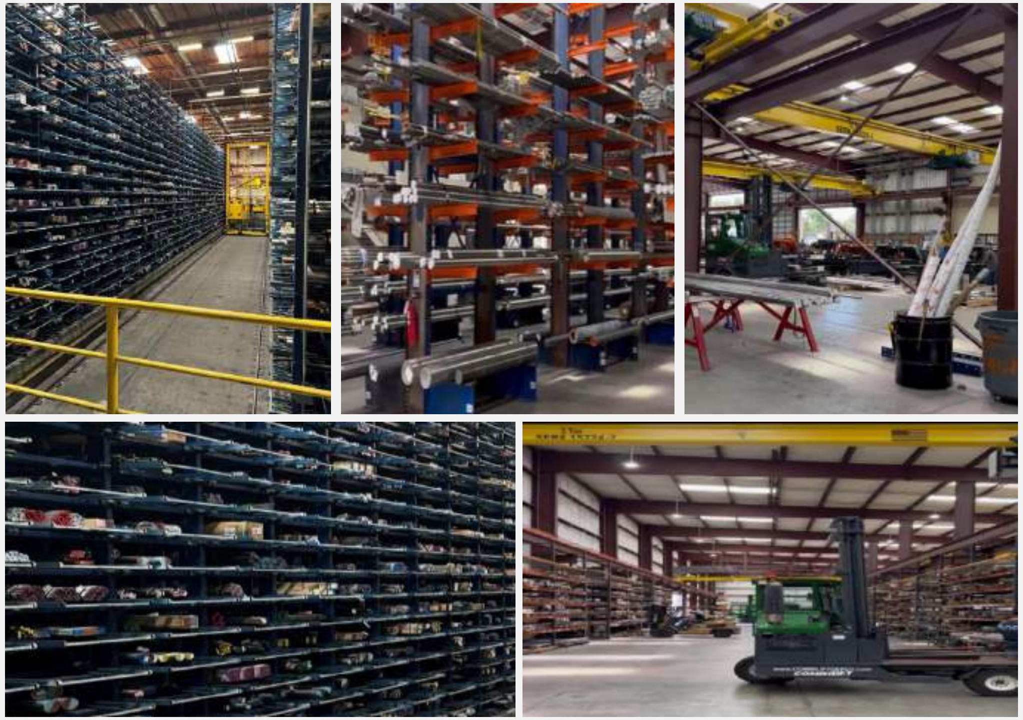
- Cutting & processing equipment
- Processing to customer order specifications
- Higher sales & profitability

### Supply & Inventory Hub

- Pre-positioned inventory of key materials & components
- Safety stock based on customer demand
- Fast delivery through integrated local inventory, processing & inspection
- Stable shipment despite supply fluctuations
- Shorter lead times

### Testing Center

- Material testing equipment to reduce defects
- Highest product quality through testing



• Photos of another global DC: interior and stocked materials & components

※ The above reflects current plans and may change depending on business conditions and implementation progress.

# Space Distribution Center

- Plans to build a high-quality supply network for the global aerospace industry and operate the Space Distribution Center (SDC).

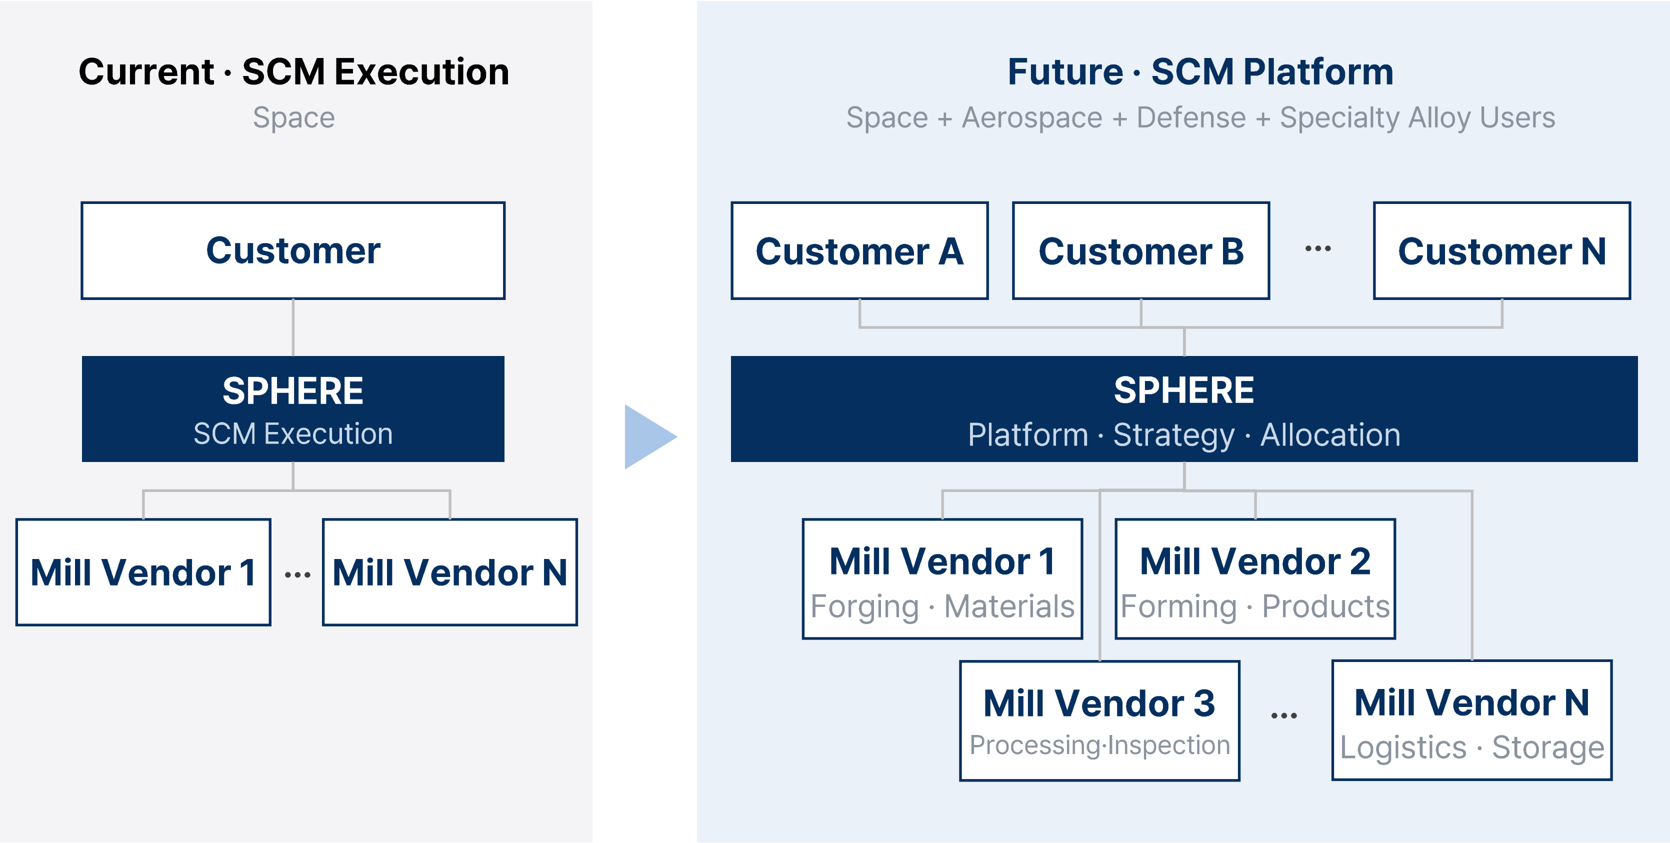
**Future** Full Vertical Integration from raw material sourcing through specialty alloy processing

# Strategic Value: SCM Platform Vision

- Sphere analyzes complex specialty alloy demand and optimizes the mix of technologies, products, and production capabilities across its global vendor network.
- As its customer and industry base expands, Sphere can further optimize demand consolidation, volume allocation, quality, and delivery, enabling the existing network to scale across new customers and industries.



## Platform Benefits

**Integrated Operations**
Leads integration of customer demand and vendor production capacity

**Strategic Planning & Execution**
Leads supply strategy design and volume allocation optimization

**Greater Influence**
Stronger influence in negotiating supply terms and setting priorities

**Scalable Structure**
Continued expansion into new customers and industries through the existing network

# Strategic Value: SCM Platform Vision

- The U.S. aerospace and defense ecosystem is centered around launch facilities, propulsion hubs, major defense companies, NASA facilities, and advanced manufacturing hubs, forming regional clusters across key locations.
