

Alteogen Investor Presentation

September 2026

Science that **advances** Innovation that **matters** Better **lives** for patients

Delivering advanced biologics and next-generation solutions to patients

At Alteogen, we believe innovation should always be driven by patient needs. Through global collaboration and our proprietary platform, we advance research and development to create pioneering biopharmaceutical solutions that improve lives worldwide.

Company Overview

Alteogen is dedicated to developing next-generation biologics to improve quality of life

Alteogen Inc.

● Corporate Information

Established	May 13th, 2008
Founder	Soon-Jae Park, Ph.D. Hye-Shin Chung, Ph.D.
CEO	Tae-Yon Chun, Ph.D.
Headquarters	Daejeon, South Korea
Stock code	KOSDAQ 196170
Subsidiary	Alteogen Biologics - Eylea® biosimilar - Eylea® biobetter - Tergase® sales & marketing - hGH sales & marketing
Website	www.alteogen.com

● Journey of Innovation

May 2008	- Company founded
Dec. 2014	- IPO & listed on KOSDAQ
Dec. 2019	- 1 st Hybrozyme® licensing deal with Sanofi
July 2024	- Tergase® approved by MFDS (Ministry of Food and Drug Safety) - MAA submission to EMA for Eylea® biosimilar 'EYLUXVI® (ALT-L9)'
Sep. 2025	- EYLUXVI® (ALT-L9) approved by the European Commission - Partner MSD received FDA approval for KEYTRUDA QLEX™
Nov. 2025	- Partner MSD(known as Merck in the US/Canada) received EC approval for KEYTRUDA SC™
Jan. 2026	- 7 th Hybrozyme® licensing deal with GSK
Mar. 2026	- 8 th Hybrozyme® licensing deal with Biogen
May 2026	- ALT-L9, an aflibercept biosimilar, received MFDS approval
Sep. 2026	- 10 th Hybrozyme® option and licensing deal with Novartis

Alteogen's Core Technology Platforms

We pursue breakthrough R&D beyond conventional biologics through its core platform technologies

Hybrozyme®

Novel Human Hyaluronidase

- Enabling large volume subcutaneous delivery
- Competitive patent portfolio (secured substance, co-formulation, and process patents)
- Licensed to global top pharmaceutical companies

NexP®

Long-Acting Biobetter

- Biobetter technology for longer dosing cycles
- Superior performance compared to similar long-acting technologies
- Licensed to Cristália (Brazil): Weekly human growth hormone (hGH)

NexMab®

Antibody-Drug Conjugate

- Site-specific ADC junction technology
- Core technologies applicable for blockbuster ADC products including subcutaneous ADC products

Robust Pipeline

Alteogen is expanding its robust pipeline, including ALT-B4 for subcutaneous formulation conversion

✓ Approved

Tergase®

Standalone ALT-B4
recombinant human
hyaluronidase

MFDS (South Korea)

安曲妥® (ALT-L2)

Herceptin® biosimilar

NMPA (China) by partner
Qilu Pharmaceutical

Eyluxvi® (ALT-L9)

Eylea® biosimilar

EMA (Europe)
MFDS (South Korea)
SFDA (Saudi Arabia)

Keytruda® SC

pembrolizumab + ALT-B4

FDA, EMA, Health Canada,
MFDS, and PMDA
by partner MSD

In Development

Hybrozyme®

ALT-B4

Multiple products by
partners, including Enhertu®
SC by Daiichi Sankyo

Weekly hGH*

ALT-P1

Global Phase 2 in pGHD*

New Technology

Once-monthly drug delivery platform

ALT-B4: A Novel Hyaluronidase Enabling Subcutaneous Delivery via Hybrozyme®

HYAL - 3D structure of hyaluronidase identified

PH20 - Simulation of PH20 based on HYAL1 structure
- Computer modelling & identification of domain substitution

- Generation of > 300 chimeric variants
- Extensive activity assays and other physicochemical assays

Alteogen's proprietary recombinant human hyaluronidase

ALT-B4

(INN: berahyaluronidase alfa)

3D structure of ALT-B4 identified

• Differentiation from rHuPH20

 Enhanced protein stability with higher tolerance to thermal stress

 Higher specific activity

 Higher productivity

 Lower immunogenicity, confirmed by in silico, in vitro, and clinical studies

 Patent coverage (up to early 2043 in the US)

Subcutaneous Injections Benefit Patients, Healthcare Providers, and Pharmaceutical Companies

SC Formulation

High Demand for Patients – Pharma – Healthcare Providers

Patients

Improved patient convenience and quality of life

Reduced time in-chair and in the treatment room

No IV infusion related side effects

At-home, self-administered injections available

Conversion from IV to SC Injection

IV

- Time-consuming
- Resource-intensive
- Hospital-based infusion

SC

- ✓ Short injection time
- ✓ Cost-efficient
- ✓ Self-administration

SC Conversion Catalyst

Pharma Companies

Extended patent coverage through formulation change

Competitive advantage against competing products

Simple, small-scale PK/PD trials required

Healthcare Providers

Increased efficiency in patient treatment

Reduced time on treatment preparation, administration process, and patient monitoring

Ten Global Pharma Licensing Agreements for SC Formulation Conversion

Proven technology through partnerships with top-tier global pharmaceutical companies

Keytruda Qlex™ Commercial & Sales Trends

Keytruda Qlex, a fast and convenient subcutaneous treatment, achieved blockbuster-level sales within just three quarters of launch

Keytruda Qlex™ US Commercial

KEYTRUDA QLEX is given by your healthcare provider.

KEYTRUDA Qlex™

Keytruda Qlex™ Sales Trends*

Expanding ALT-B4 Applicability Beyond Traditional Monoclonal Antibodies

Multiple collaboration opportunities
with same-target mAbs and different modalities

Bispecific
mAb

Single Target
mAb

+

ALT-B4

Expansion of the use of
Hybrozyme technology

+

ADC
(Antibody Drug
Conjugate)

RNA

Tergase® Offers Higher Purity and Safety than Conventional Animal-Derived Hyaluronidases

Tergase®

- Standalone hyaluronidase product administered subcutaneously to reduce pain or swelling after dermal filler injection or surgeries
- Recombinant human hyaluronidase of higher purity (99%) offers a safer option compared to animal-derived products that contain foreign protein with known side effects

● Pivotal Clinical Trial

Completed a pivotal clinical trial with 244 subjects in South Korea

NDA applied to MFDS
Feb. 7, 2023

Marketing Authorization
July 5, 2024

Clinical Trial Results

- No ADAs observed
- Lower injection site reactions versus other products

Company A
(animal-derived)

Company B
(animal-derived)

Tergase®

Higher purity
Compared to
existing products

Continue to Grow Through Collaboration Revenue and Innovative In-House Drug Development

Hybrid Business Model

Revenue & Profit Growth* (2022 – 2025)

(Unit: KRW in millions)

* Consolidated P&L

ALT-P1: Long-Acting Human Growth Hormone

Market / Plans for ALT-P1

Global Human Growth Hormone (HGH) Market*

(\$bn)

- ✓ The HGH Market is experiencing significant growth, driven by expanding clinical uses (pediatric deficiency, Turner Syndrome, adult conditions) and innovations like long-acting formulations.

ALT-P1, a once-weekly human growth hormone injection is under development

ALT-P1 received orphan drug designation from the FDA

Preliminary Results from Phase 2 of ALT-P1

AHV (Annual Height Velocity) at week 25

Arm	AHV	SD
ALT-P1 0.4 mg/kg	10.93	3.15
ALT-P1 0.6 mg/kg	9.80	2.98
Genotropin	9.38	2.71

- At Week 25, the annual height velocity (AHV) of once-weekly ALT-P1 demonstrated comparable efficacy to once-daily Genotropin in pGHD patients
- A Phase 2 clinical trial is ongoing in pGHD, with top-line results expected in H2 2026

Ultra-Long-Acting Platform Fusion Technology

A once-monthly formulation development

Current Obesity Treatment Landscape

Daily Injections → Weekly Injections

(e.g.) Saxenda (Q1D), Wegovy (Q1W), Zepbound (Q1W)

Daily Oral Pills

In development by pharmaceutical companies including Novo Nordisk

There is still an unmet medical need for longer-acting obesity drugs to improve long-term adherence

Global Obesity Drug Market*

Novel Once-Monthly Treatment (M5)

Results from animal studies

- Weight reduction comparable to the reference drug
- Lower rebound after treatment discontinuation compared with the reference drug

→ Demonstrated potential for an effective monthly obesity therapy

Plans for Manufacturing Facilities

Aiming to establish manufacturing facilities for biopharmaceuticals, including ALT-B4, Tergase®, and Eyluxvi®

• Targets

200–2,000 L of bio-reactors for drug substance (DS) and drug products (DP)

Securing strategic flexibility in manufacturing

Engagement with domestic and international regulatory authorities, including MFDS, EMA, and FDA

CapEx estimation: approx. \$200M (utilizing available cash)

(Example plant image)

Beyond Keytruda SC: The Next Wave of Blockbuster SC Commercialization

To include Enhertu, Imfinzi, Jemperli, and other partnered products

2026 - 2030

Increasing revenue through the commercialization of multiple products utilizing Hybrozyme®

Beyond

Evolving into a biopharmaceutical company with R&D, in-house manufacturing and commercialization

ALTEOGEN
